

RETINA

in progress
PRESENT & FUTURE

VIRTUAL

*We are pleased to announce the 10th Edition of **Retina in Progress 2021** that will be a **new live virtual and digital meeting format**.*

It will be dynamic, interactive: the new digital will connect colleagues to discuss and debate the latest developments in the field of retinal pathologies. The speakers at the conference - an elite group of researchers and clinicians - will present the findings of their latest studies on the diagnosis and management of vitreoretinal diseases.

We will have for pre-recorded Abstract, Poster, Interesting Case and Digital Exhibition.

Although we will miss the friendly esprit of our traditional meeting format, our aim is to create a new opportunity to hear firsthand about research results and find out what they mean to clinical everyday applications through quality scientific and educational interchange, debate and discussion.

Please mark your calendars for the debut of

Retina in Progress VR Live April 15, 16 and 17, 2021.

Chairmen: Alfredo Pece, Paolo Lanzetta
